

Web Level 1 - Assignment #1

Description

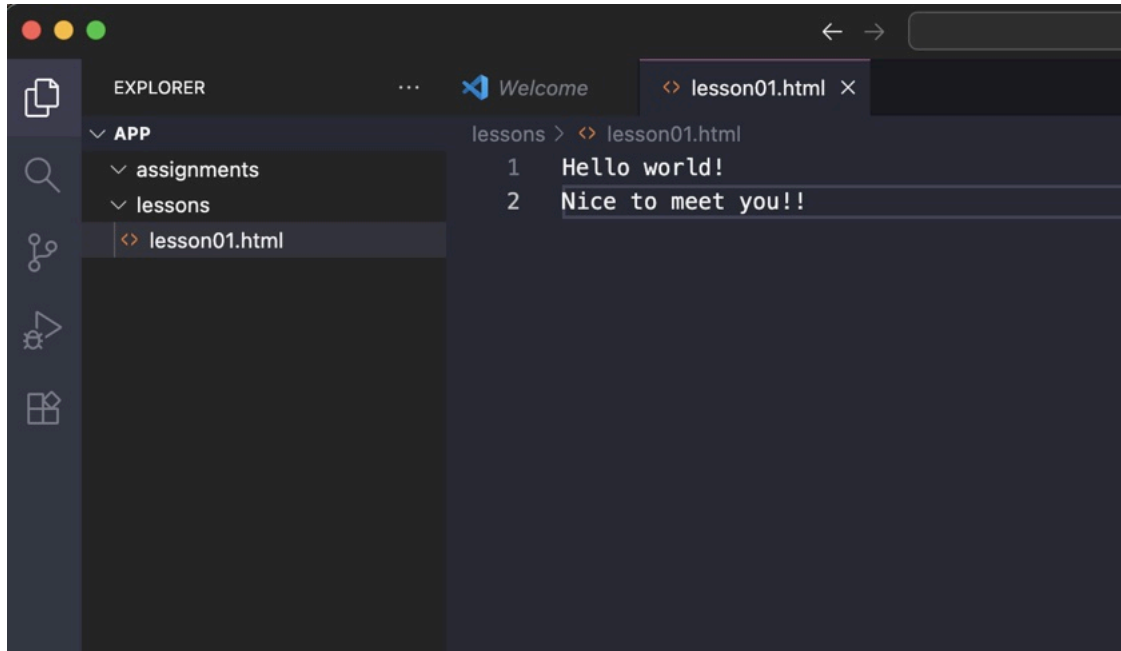

For your first assignment, you will download and install VS Code, the text editor we will be using in this class. Then make sure you create and save your first file in the specified folder.

Requirements

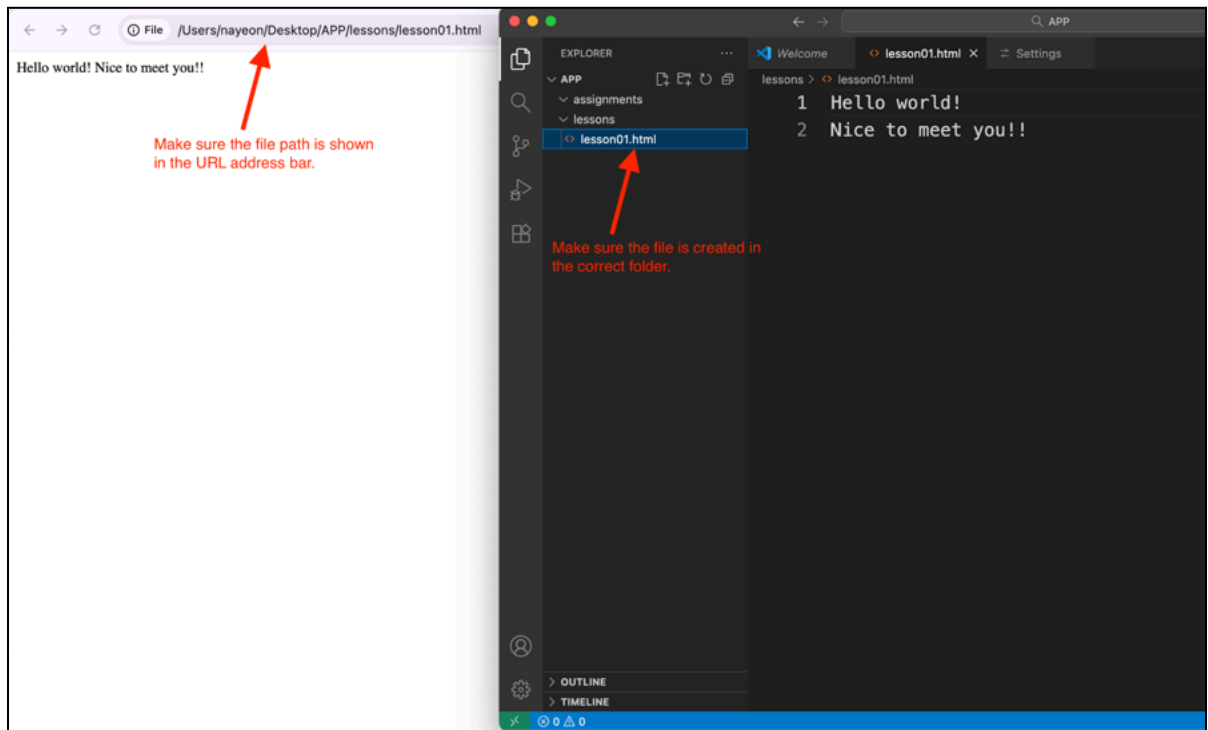

1. Download and install VS Code from <https://code.visualstudio.com/>.
2. Like shown in this week's lesson video, create a **new folder** in your computer's **Desktop**. Name it **APP**. In the **APP** folder, create two more folders named **lessons** and **assignments**. You will use these folders in future lessons.

3. Open up **VS Code**. Then click File -> Open Folder to open the **APP** folder that you just created.
4. Click on the first icon on the left menu bar to open the **File Explorer**. Create a new file in the **lessons** folder. Name it **lesson01.html**. Type some text in it and save it. If you already did this while watching the lesson video, you don't need to do it again.

5. Open this html file in a browser. You can use any browser you would like. Try editing the file in VS Code and then refresh the browser to see the changes.
6. Take a screenshot of the file displayed on the browser and in VS Code, like the example below. Make sure the **file path** is shown in the URL address bar. Make sure the HTML file is created in the correct folder.

7. Upload this screenshot to your WhatsApp subgroup to get credit for this assignment!
